

*The MVP program is well-balanced nutritionally. It contains proteolytic enzymes with a very high activity level. This is an important factor in supporting the circulatory system.*

The MVP program is a series of nutritional supplements, specially formulated to support proper circulation. Every cell in your body relies on proper circulation of the blood to supply the oxygen and other nutrients needed to keep them alive and reproducing. When cell reproduction stops, so does life!

Atherosclerosis (hardening of the arteries) is the number one contributing factor in heart disease. Among the most important factors causing atherosclerosis are: diets high in fats and sugars; pollution of air, water, and foods; certain drugs and chemicals; depressed protein digestion in the blood; decreased immune function; and poor overall metabolism. The risk of blood clots is also much greater when atherosclerosis is present.

The MVP program consists of four separate formulas. For best results, the complete program should be used to support the diet.

**1**

**MVP 1** contains a large quantity of omega 3 fatty acids, which are important in human nutrition. MVP 1 also contains vitamin E, linoleic acid, and curcumin, which are known to be essential to a healthy heart.

**2**

**MVP 2** is the most complete multi-nutrient formula that we know of, as it contains not only the necessary vitamins and minerals required by the body for good health, but also many enzymes and essential amino acids which may contribute nutrition important to the arteries.

**3**

**MVP 3** contains large amounts of proteolytic enzymes, plus trypsin and chymotrypsin which are potent pancreatic enzymes. Researchers have found that the presence of enzymes in the blood is important for a sound circulatory system.

**4**

**MVP 4** contains concentrated amounts of thymus, spleen, and adrenal gland, specially processed to insure rawness and preserve their natural state. These glands are important in the human body to support the immune system, nourish the blood, and maintain proper metabolism.

*Nourish your blood and  
circulatory system—  
and live with a  
healthy heart!*

**MVP**

Dr. Kenneth Daub, D.C., the creator of MVP, began general family practice in 1957 and continued until 1976, when he entered the field of circulatory diseases. After studying the non-invasive diagnostic procedures taught by Dr. Robert Barnes of the University of Iowa, Dr. Daub decided to devote full time to the study of the circulatory system.

Since he began performing non-invasive vascular testing in 1978, Dr. Daub has developed a nutritional program to support the dietary intake of individuals who may have circulatory problems. By motivating people to improve their diet and use a supplemental program, he is convinced that thousands will become healthier and live longer by improving their circulatory system.
